ABOUT BIG SHINE ENERGY

In 1989 Big Shine began as a technology company in Korea with a focus on semi conductors. By 2007, Big Shine transitioned into the automation industry, supplying transistors, flash memory and diodes. It narrowed its focus on diode technology used in LED lighting and Big Shine Energy was developed. Big Shine Energy has established itself as an energy conservation company that leverages its 20-year background in technology to provide a better quality of life for its partners through LED lighting and HVAC services.

- 
- 1989** Big Shine founded in Korea
 - 1997** USA Corporation established
 - 2001** Big Shine New Jersey established;
Hong Kong Corporation established

GOALS FOR 2018

Turnkey Solution

Big Shine Energy provides a turnkey solution service. This allows its staff to provide thorough support on every project from start to finish.

1 Research and Development

Quality control is Big Shine Energy's goal when producing each line of products. Proper research of the application where the products will be used is essential before the manufacturing process.

2 Manufacturing

State of the art components that are designed to meet all United States qualifications are produced within Big Shine Energy's global manufacturing centers.

3 Lighting Audit

Big Shine Energy provides a complete lighting and HVAC evaluation and prepares a clear, detailed project report including a 3D photometric analysis.

4 Rebates & Incentives

Big Shine Energy partners with dozens of incentive programs to assist with your incentive paperwork, and help you get the most out of your lighting upgrade.

5 Project Coordination

All phases of the project are coordinated to meet your needs and facilitate a smooth installation with minimal interruption to your business operations.

6 Installation

Big Shine Energy works with a team of installers that is unparalleled in experience and efficiency. We pride ourselves in completing the job quickly without sacrificing quality to ensure customer satisfaction.

7 Customer Satisfaction

Once a Big Shine customer, always a Big Shine customer. After the installation, Big Shine Energy will ensure stellar after-sale service, including a one-year service warranty and five-year product warranty.

CUSTOMER SATISFACTION

Big Shine Energy understands that it's important to get it right the first time. That's why its consultants work cohesively with its corporate staff to ensure that the needs of its partners are carried out with integrity and respect.

That same integrity and respect carries over into the quality control in all of our products. LED lighting is a fairly young technology, and surges in popularity drive manufacturers to produce subpar products, leaving unknowing consumers with failing lights.

Manufacturing, distributing and installing its own products gives Big Shine Energy total control over every aspect of its lighting projects and ensures that all of our products meet the highest standards of quality in the United States.

A turnkey solution service combined with excellent staff support and the passion for energy conservation puts Big Shine Energy's partners in good hands.

The Incentive Process: **MAKING IT EASY**

Big Shine Energy consultants work locally in different states throughout the US. Most states have programs in place that offer incentives for business owners who are ready to make the switch to LED lighting. However, extensive rules and regulations can make receiving a rebate a tedious process. Business owners and executives may not have the time to handle the paperwork required by their local incentive program. Big Shine Energy will take that load off of its partners' shoulders. Guiding each customer from beginning to end of the process, consultants obtain and file all necessary information to apply for rebates.

Doing what is right is not always easy, but protecting the environment is the right thing to do. That's why Big Shine Energy makes it easier for its partners to be part of something greater than business. Understanding the dangers of not taking a stand against CO2 pollution is one step toward energy conservation. Big Shine Energy is here to help businesses participate in leading the world to a brighter future.

Why we decided to go with Big Shine over the others was the fact that it was all turnkey. It was very, very important to us that this installation go as we needed it done. We did not want to shut down, they worked around [our schedule]. And I don't think anyone else would have been willing to do that.

GENE KLESSER
KLOECKNER METALS

Our Big Shine representative did a great job of describing the benefits. I was thinking of the project in terms of saving energy and money, I really didn't comprehend how much better the lights would be. We were pretty impressed with how quickly it went.

DAN KURTZ
COUNTY WASTE MANAGEMENT

I would highly recommend Big Shine. They worked with Eversource to rebate up to 40% of the cost. Big Shine took care of all the paperwork to get that rebate done. They were great to work with. It was probably the best thing to do.
